PROBLEM & PURPOSE

The Problem

- Students often struggle to track daily expenses.
- Small purchases can accumulate without being noticed.
- Students may exceed their budget

Our Goals

- A C++ program that helps students record income and expenses, view their financial summary, and track their savings.

MAIN FEATURES

ADD INCOME

- Record money received.

ADD EXPENSE

- Record daily spending.

VIEW TRANSACTION

- Display all recorded income and expenses.

FINANCIAL SUMMARY

- Calculate income, expenses, and remaining balance

ADD SAVINGS

- Record the amount saved, date, and saving purpose

VIEW SAVING

- View saving record and show total savings.

PROJECT GOALS

FINANCIAL AWARENESS:

Help students understand their spending habits.

ORGANIZATION:

Keep income, expenses, and savings records organized.

EASY TRACKING:

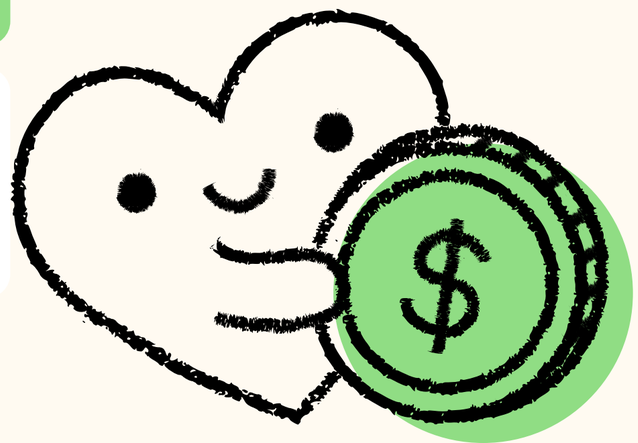

Make recording financial activities simple and convenient.

FINANCIAL UNDERSTANDING:

Help users understand their remaining balance.

SAVING HABITS:

Encourage students to develop regular saving habits.

ALGORITHM/CONCEPT

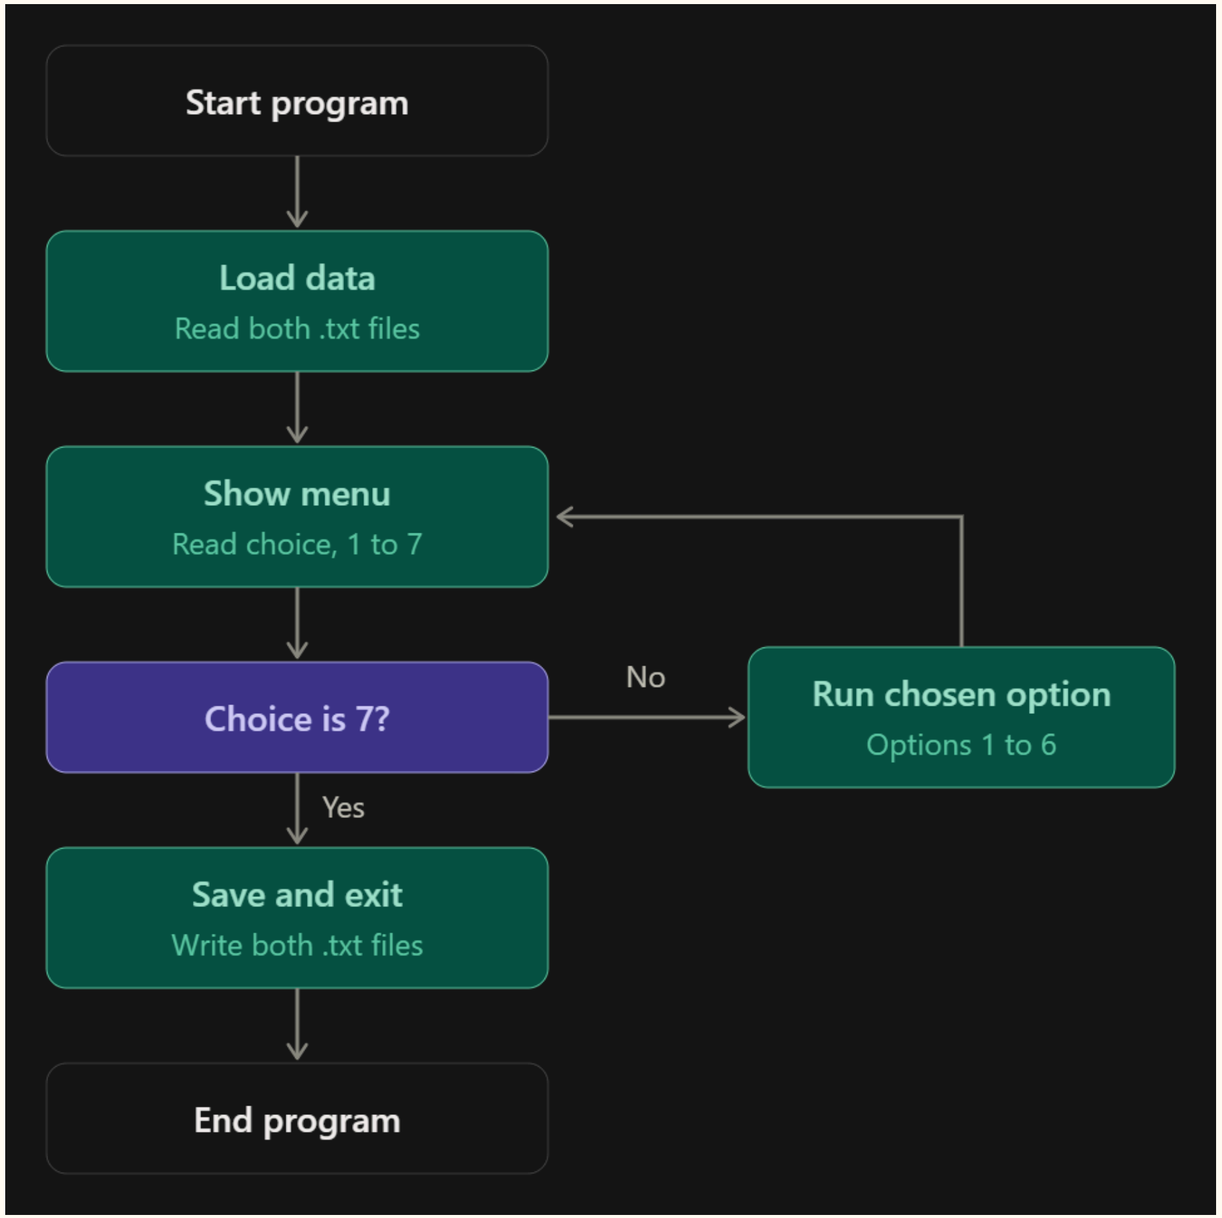

Class & Constructor	Store transaction information such as type, amount, date, and description.
Vector	Store multiple transaction and saving records.
Loops	Repeat the menu and process multiple records (displaying transactions, calculate totals, and viewing savings).
Conditional Statements	Validate inputs and distinguish income from expenses.
Files Handling	Save and load financial records from text files. Example: transactions.txt and savings.txt.

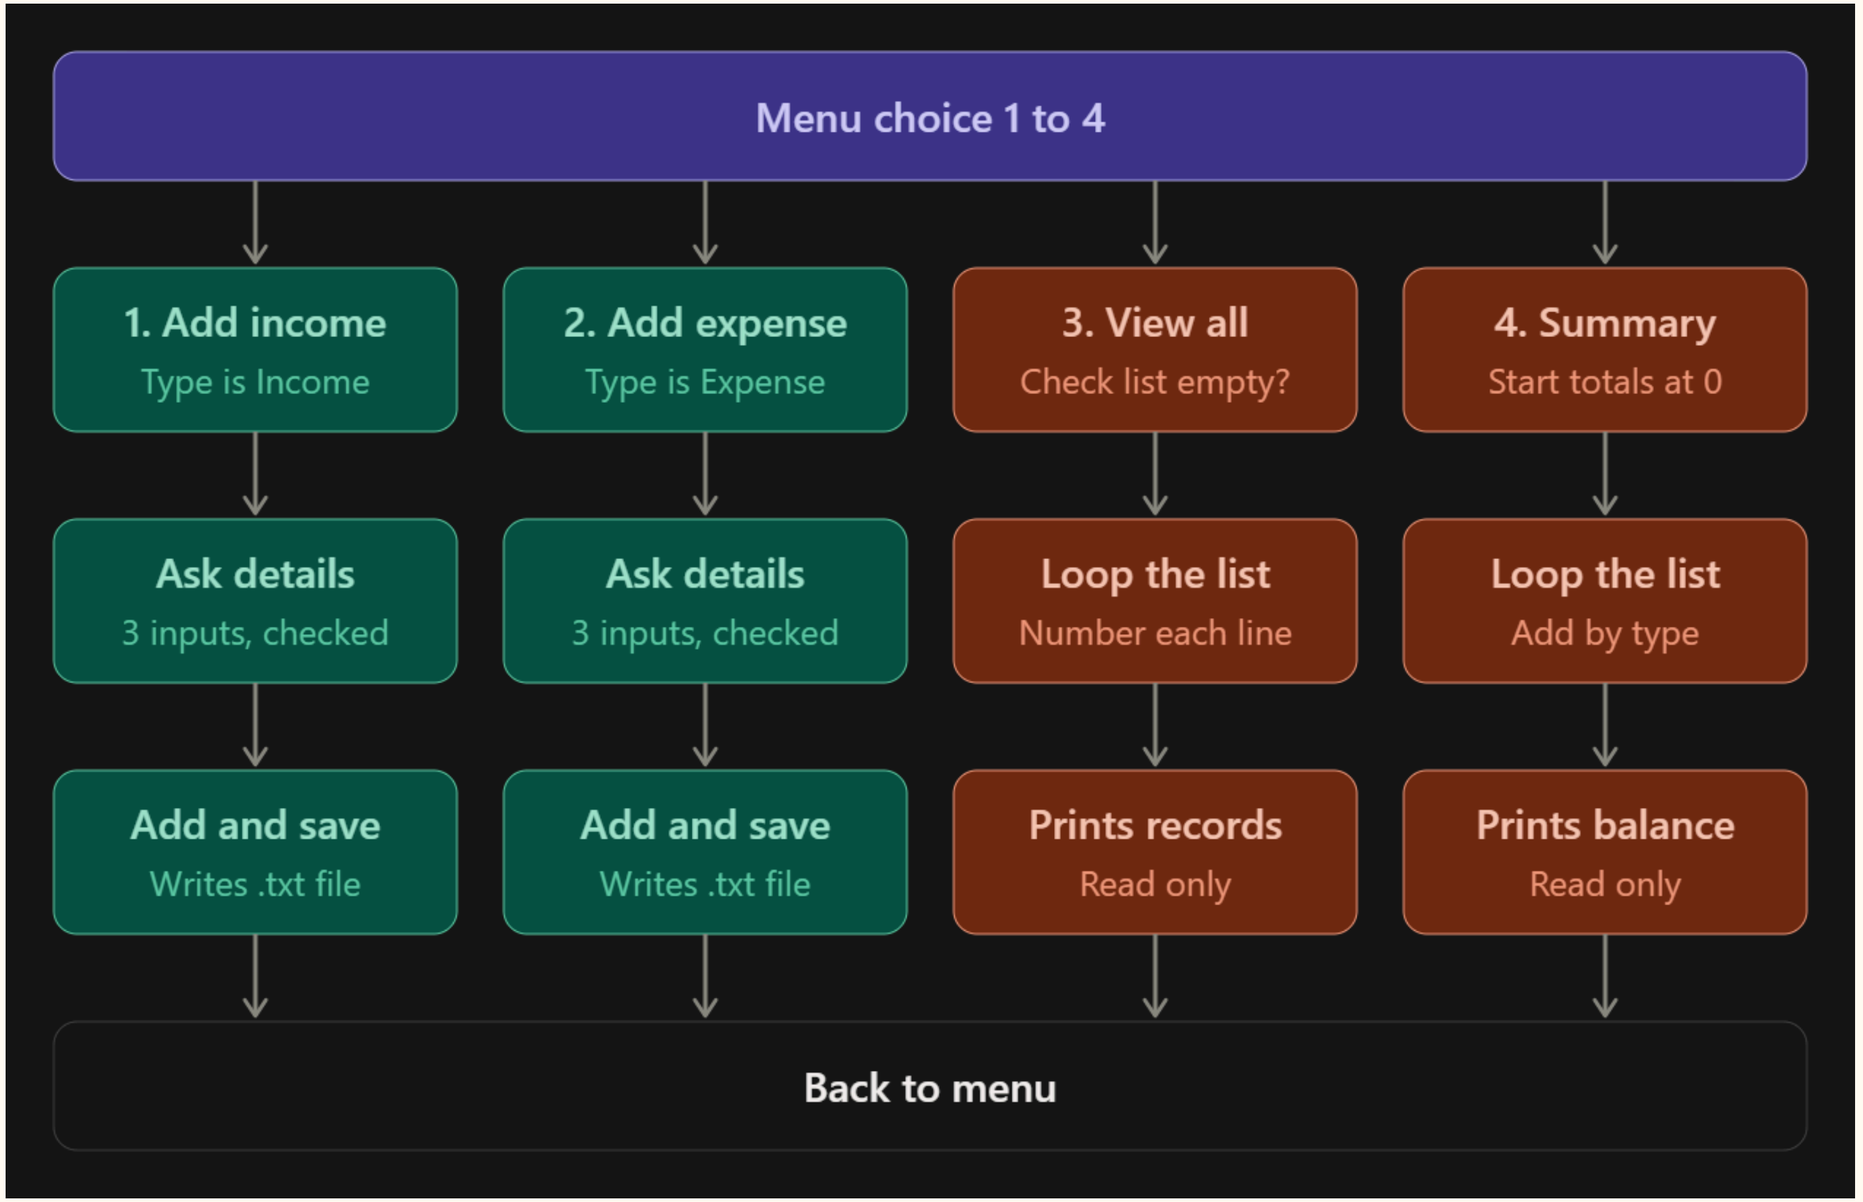

SYSTEM DESIGN

One Class	Transaction
Eleven Functions	Void functions, Normal function, and main function
Two text files	transactions.txt savings.txt
Graphical User Interface	Dear Imgui

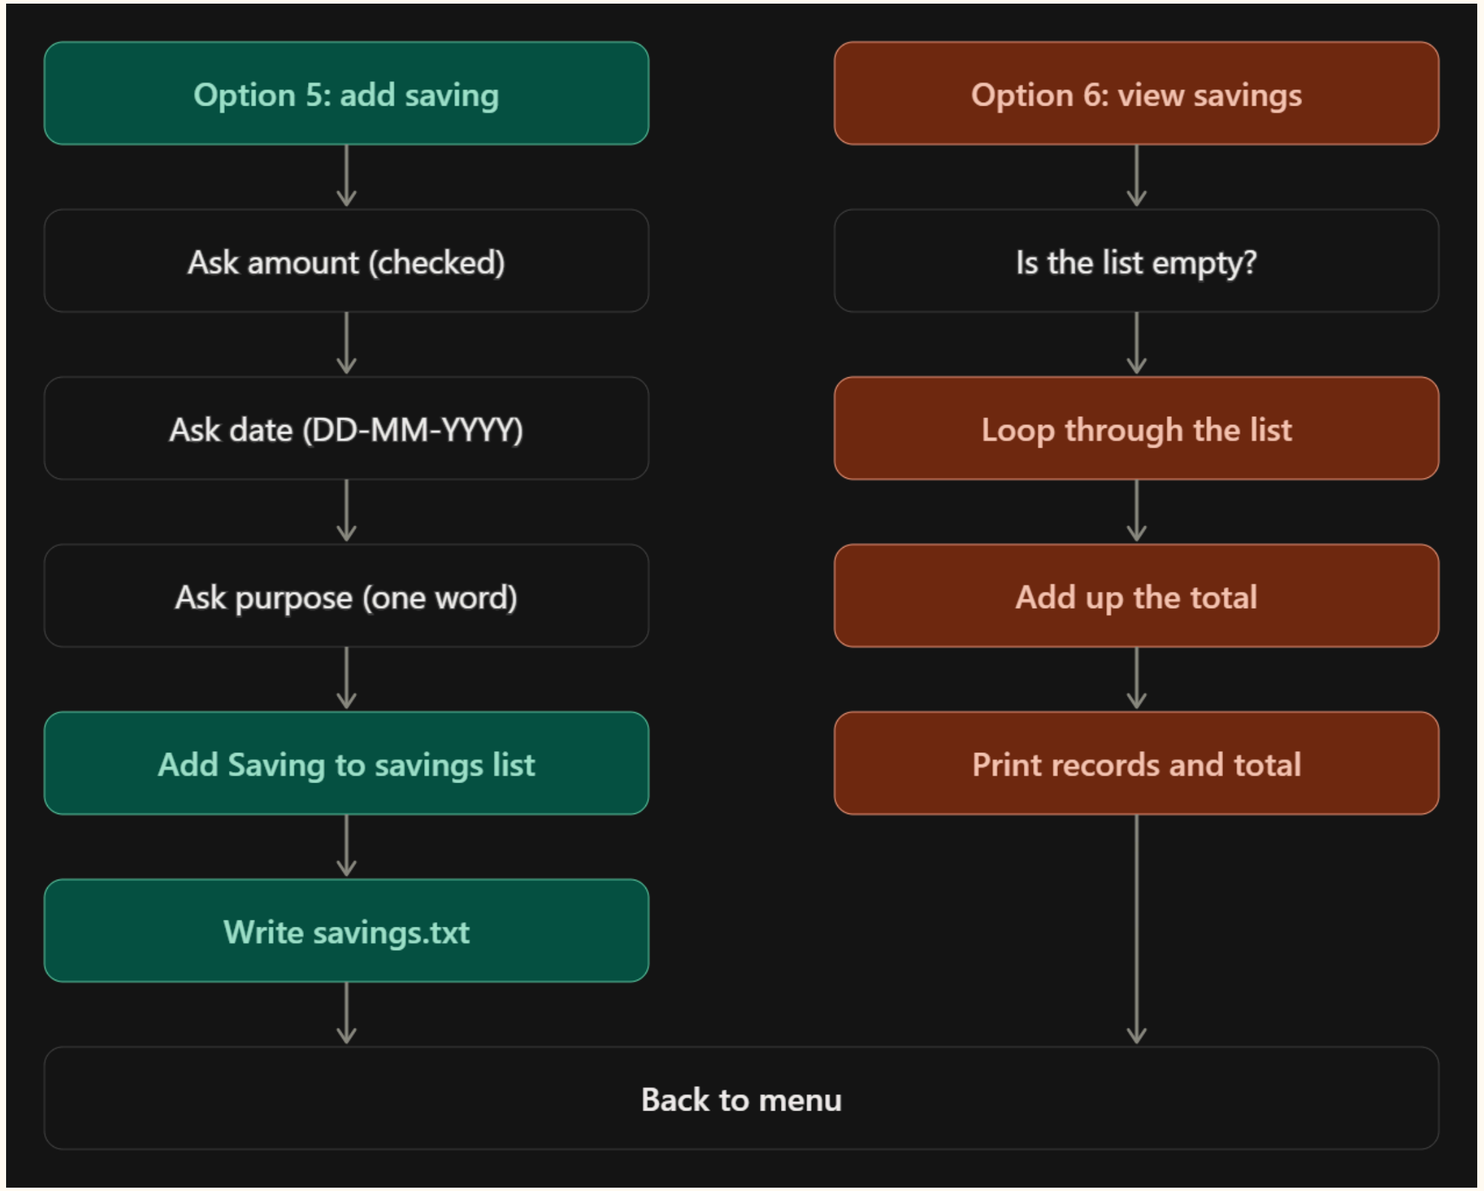

SYSTEM DESIGN
